ŻABY WCHODZA W STAN HIBERNACJI!

W zimie żaby nie śpią jak ludzie, lecz hibernują – spowalniają swój metabolizm i czekają na cieplejsze dni, aby móc znów aktywnie się poruszać.

ŻABY ODDYCHAJĄ PRZEZ SKÓRĘ!

Oprócz płuc, żaby mogą wchłaniać tlen bezpośrednio przez skórę, co pomaga im utrzymać wilgotność niezbędną do życia.

EN

FROGS GO INTO HIBERNATION!

In winter, frogs do not sleep like humans, but hibernate – slowing down their metabolism and waiting for warmer days so that they can move actively again.

FROGS BREATHE THROUGH THEIR SKIN!

In addition to their lungs, frogs can absorb oxygen directly through their skin, which helps them maintain the moisture they need to live.

FR

LES GRENOUILLES ENTRENT EN HIBERNATION!

En hiver, les grenouilles ne dorment pas comme les humains, mais hibernent. Elles ralentissent leur métabolisme et attendent des journées plus chaudes pour se remettre à bouger.

LES GRENOUILLES RESPIRENT PAR LA PEAU!

En plus de leurs poumons, les grenouilles peuvent absorber de l'oxygène directement par leur peau, ce qui les aide à maintenir l'humidité dont elles ont besoin pour vivre.

ES

¡LAS RANAS ENTRAN EN HIBERNACIÓN!

En invierno, las ranas no duermen como los humanos, sino que hibernan: ralentizan su metabolismo y esperan días más cálidos para volver a moverse activamente.

¡LAS RANAS RESPIRAN POR LA PIEL!

Además de sus pulmones, las ranas pueden absorber oxígeno directamente a través de la piel, lo que les ayuda a mantener la humedad que necesitan para vivir.
